Mission of the Coordinating Board

The Texas Higher Education Coordinating Board's mission is to work with the Legislature, Governor, governing boards, higher education institutions, and other entities to help Texas meet the goals of the state's higher education plan, *Closing the Gaps by 2015*, and thereby provide the people of Texas the widest access to higher education of the highest quality in the most efficient manner.

Philosophy of the Coordinating Board

The Texas Higher Education Coordinating Board will promote access to quality higher education across the state with the conviction that access without quality is mediocrity and that quality without access is unacceptable. The Board will be open, ethical, responsive, and committed to public service. The Board will approach its work with a sense of purpose and responsibility to the people of Texas and is committed to the best use of public monies. The Coordinating Board will engage in actions that add value to Texas and to higher education. The agency will avoid efforts that do not add value or that are duplicated by other entities.

Executive Summary

Board Directive

In April 2012, the Texas Higher Education Coordinating Board (Coordinating Board) directed staff to conduct a survey of Texas medical schools' undergraduate medical education, with a focus on the availability of required clerkships and selective and elective rotations, and the capacity of existing clinical education sites.

This report presents information and data to document the current availability of required clerkships and selective and elective clinical rotations. Staff compiled and analyzed data submitted from the state's nine medical schools to better understand whether clinical availability was adequate to accommodate the recent and anticipated medical school enrollment increases. The staff analysis also explored whether there is enough clinical capacity at the existing sites to accommodate additional medical students, including those who may be from an international medical school.

Methodology

Information and data detailing the requirements and locations of the third and fourth years of medical education have not been previously collected by the Coordinating Board and are not available elsewhere. Most medical schools provide general descriptive information about their curriculum on their websites; however, the information is not presented uniformly, and the specific requirements for clinical experiences are often not presented and clinical sites are not listed.

Consistent information and data across medical schools related to undergraduate medical education clinical experiences and sites were essential to this report. To facilitate the preparation of the report and ensure consistency in responses, the Coordinating Board staff convened a workgroup, which included representatives from the Texas health-related institutions that offer degrees in medicine or osteopathic medicine, system office officials, and professional medicine. This report presents the results of the undergraduate medical education (UME) survey, the staff analysis of the data and survey responses received, and findings and recommendations.

Findings

Texas medical students are required to complete specific clinical education experiences; however, requirements vary by medical school. This includes variations in the length of the clinical experiences, usually in the number of weeks required; the number of clinical sites available; and the number of medical students assigned to each site.

Texas medical schools have developed strong and long-term relationships with teaching hospitals that provide the majority of clinical sites used by the medical schools for their students' clinical clerkships and rotations.

Texas medical schools' relationships with teaching hospitals are fluid; the clinical experiences available change based on student demand and needs, faculty availability, other health professions use of the site, and patient load.

The medical schools and teaching hospitals negotiate agreements that include, but are not limited to, the number of medical students that will complete a clinical experience at the teaching hospital.

Teaching hospitals and clinical sites, including physician offices, may allow medical students from more than one medical school to rotate through their clinics and services.

From 2009 through 2011, the average number of students medical schools placed into core clerkships increased at three medical schools to accommodate the state's increased medical student enrollments. Four Texas medical schools were responsible for 80 percent of the increase in Texas medical school enrollments.

Based on eight Texas medical schools' responses, an estimated 42 percent of medical students from those schools leave the state to complete clinical elective rotations. These experiences allow medical students to explore their potential medical specialty choices and better understand the available residency opportunities.

From 2009 to 2011, the number of visiting students at Texas medical schools increased 28 percent; however, 2010 had the highest number of visiting students (1,099) for the three-year period. These students complete between four weeks and 20 weeks of clinical experiences in Texas.

The medical schools do not publish or report financial information related to the cost of educating a medical student at a clinical site. Three Texas medical schools reported paying their clinical sites to allow their medical students to obtain their required and elective clinical experiences. The amounts ranged by school from \$300,000 to \$12.2 million. Two medical schools reported that payment for medical students was included in an institutional payment to their teaching partner, but did not provide specific amounts. Four medical schools reported that they did not pay their clinical partners.

Due to the limited number of medical schools that reported payment information related to clinical education and the wide range of the amounts reported by a few

medical schools, it is not possible to draw any meaningful conclusions related to the payments made by medical schools to clerkship sites.

Recommendations

Additional medical schools should not be established or opened until the number of first-year physician residency positions exceeds the number of graduating medical student by 10 percent.

Existing medical schools should not increase their entering medical student enrollment, until the number of first-year physician residency positions exceeds the number of graduating medical students by 10 percent.

Texas medical schools should increase capacity of existing residency programs, which would allow additional medical students to train at the sites. Priority should be given to residency programs that accept first-year entering residents.

Texas medical schools should collaborate and work to develop new residency programs that accept first-year medical residents, and once developed, could serve as clinical sites for medical students.

Texas medical schools should work to develop greater transparency in financial information regarding the cost of medical students' clinical education.

Texas medical schools should collaborate and establish a uniform reporting structure that will help students, consumers, and policymakers better understand the cost of medical education.

Board Directive

In April 2012, the Texas Higher Education Coordinating Board (Coordinating Board) directed staff to conduct a survey of Texas medical schools' undergraduate medical education, with a focus on the availability of required clerkships and selective and elective rotations, and the capacity of existing clinical education sites.

This report presents information and data to document the current availability of required clerkships and selective and elective clinical rotations. Staff compiled and analyzed data submitted from the state's nine medical schools to better understand whether clinical availability was adequate to accommodate the recent and anticipated medical school enrollment increases. The staff analysis also explored whether there is enough clinical capacity at the existing sites to accommodate additional medical students, including those who may be from an international medical school.

Methodology

Information and data detailing the requirements and locations of the third and fourth years of medical education have not been previously collected by the Coordinating Board and are not available elsewhere. Most medical schools provide general descriptive information about their curriculum on their websites; however, the information is not presented uniformly, and the specific requirements for clinical experiences are often not presented and clinical sites are not listed.

Consistent information and data across medical schools related to undergraduate medical education clinical experiences and sites were essential to this report. To facilitate the preparation of the report and ensure consistency in responses, the Coordinating Board staff convened a workgroup, which included representatives from the Texas health-related institutions that offer degrees in medicine or osteopathic medicine, system office officials, and professional medicine. This report presents the results of the undergraduate medical education (UME) survey, the staff analysis of the data and survey responses received, and findings and recommendations.

Medical Education Overview

The traditional education experience of a U.S. physician includes graduation from a college or university (four years), graduation from an accredited U.S. medical or osteopathic medical school (four years), and completion of a residency or graduate medical education training experience (three to eight years). Once in medical school, medical students typically spend two years in the lecture hall and two years in clinical activities required core clerkships and selective/elective rotations.

Admission to medical school is highly competitive. However, once enrolled, almost all students graduate. Based on historical attrition rates of just over 3 percent, an estimated 97 percent of the entering class of 2012-2013 will graduate in spring 2017. Texas has seven public medical schools, one public osteopathic medical school, and one private medical school.

During the first two years, medical students focus on the basic sciences; however, the curriculum varies by medical school. All U.S. medical schools accredited by the Liaison on Medical Education (LCME) must provide content in, "disciplines that have been traditionally titled anatomy, biochemistry, genetics, immunology, pathology, pharmacology, physiology, and public health sciences" (Liaison on Medical Education, Functions and Structure of a Medical School, May 2112, accessed online at www.LCME.org). Additionally, the LCME requires the inclusion of behavioral and socioeconomic subjects in the curriculum of a medical education program.

Medical students spend the last two years rotating through medical specialties, which include required experiences in pediatrics, internal medicine, family practice, obstetrics/gynecology, psychiatry, and surgery. Five Texas medical schools also require a clerkship in neurology.

The majority of Texas medical schools were started in the 1970s; however, the most recent medical school was established in El Paso in 2008. Table 1 shows each of the medical schools and the year they were founded and accredited.

First-Year Entering Enrollment

In the past decade, the number of students entering Texas medical schools increased 31 percent (Figure 1). From fall 2009 to fall 2011, an additional 163 first-year medical students entered Texas medical schools. The steady increase of entering medical students is based on increased enrollments in the state's public medical schools and the opening of Texas Tech University Health Sciences Center El Paso, Paul L. Foster School of Medicine, which matriculated its inaugural class in 2009. The number of first-year entering medical students is likely to remain at approximately 1,770 for the next several years, absent the development of new medical schools or expansion of existing programs.

Figure 1: Texas First-Year Entering Medical Students

Source: Coordinating Board, CBM 001.

Required Third and Fourth Year Core Clerkships

Texas medical schools require students to engage in experiential learning through the clinical training requirements which occur in the third and fourth years. Medical students are sent to clerkship sites, where they work full-time, much like they will as medical residents. Students observe and participate in the medical treatment of patients, often taking medical histories and writing up notes and treatment plans.

Students are required to complete specific clerkships prior to graduation from a Texas medical school and these clerkships are often referred to as core clerkships. The required clerkships are set by the medical schools and vary by school in length and number of clinical sites. The common clinical experiences required by the Texas medical schools were identified and are used by the Texas Medical Board (TMB) in their evaluation of medical schools that are not accredited by the U.S. accreditors, LCME and American Osteopathic Association (AOA).

Texas Administrative Code (TAC), Chapter 163.1 (II), includes TMB rules that allow for the evaluation of physician applicants from out-of-country/non-U.S.-accredited medical schools. These schools must provide a substantially equivalent medical curriculum: "The fundamental clinical subjects, which shall be offered in the form of required patient-related clerkships, are internal medicine, obstetrics and gynecology, pediatrics, psychiatry, family medicine, and surgery."

The TMB rules have been in place since the early 1990s, but there is a recent effort to make some changes to the requirements. In July 2012, the TMB gathered a group of medical school representatives and others to evaluate the existing rules, which delineate the specific clinical experiences required to obtain a Texas license. The group is recommending that the rules be relaxed to allow greater flexibility in reviewing the educational requirements of physicians applying for a Texas medical license.

Core Clerkships – Location and Number of Sites

Third and fourth year core clerkships are held at various locations or sites, usually but not always, within geographic proximity of the medical school. Each medical school has standards for their core clerkships; however, these vary by medical school and within the medical schools by clinical department.

Some medical schools conduct their core clerkships in several different locations and in a variety of settings. For example, a student in a pediatric core clerkship may spend the morning at a hospital and the afternoon in a pediatrician's office. Based on conversations with medical school representatives and analysis of the survey responses, it is evident that the number of students at a particular clerkship site is fluid, often changing from one rotation to the next. This fluidity depends on several factors, including the number of students that require the clerkship, faculty availability for supervision, the patient care experiences necessary for the student to adequately complete the objectives, and whether other health professionals are training at the site. As a result, it is difficult to adequately assess the clinical capacity within a particular clerkship site.

Based on the responses to the survey and the data submitted from the medical schools, information about each of the required clerkships was analyzed by medical specialty. The staff analysis shows whether a core clerkship is required by each medical school, variations in the length of time to complete, and variation by clinical location. While requirements for clerkships vary, all Texas medical schools share similarities related to the core clerkships.

Every Texas medical student must complete the following clerkships: psychiatry, family medicine, internal medicine, surgery, pediatrics, and obstetrics/gynecology. The medical schools vary in the number of weeks required for each of the clerkships. The total number of weeks that students spend in their third year completing required clerkships ranges from 44 to 52, and is presented in Table 2. Texas medical students spend an average of 47 weeks in required clerkships during the third and fourth years of medical school.

Source: Institutional data.

Additionally, the medical schools vary in the number of clinical sites available to medical students. The full listing of the core clerkships sites by medical school is included as Appendix C.

Some Texas medical schools have additional requirements for students to complete neurology. Information is presented on each of the core clerkships and the various requirements of the medical schools.

Psychiatry

Eight Texas medical schools require students to complete a psychiatry rotation in the third year and one allows students to complete the clerkship in either the third or fourth year. The number of weeks for the psychiatry clerkship range from four to eight, with seven medical schools requiring six weeks for the clerkship (Table 3).

The average number of psychiatry clerkship sites is eight. The number of sites by medical school ranged from 4 to 16 sites. The majority of the sites had a student capacity of fewer than 10. Seven medical schools reported having at least one site with a capacity of 10 to 20 students, and one institution reported a site with a capacity of 21 to 30 students. One medical school has a site with a capacity of more than 50 students.

^{*}Community sites/physician offices were reported as one site.

Family Medicine

Texas medical schools are required by state statute (Texas Education Code, Section 51.918), to have medical students complete a family medicine clerkship during the third year. Although all nine Texas medical schools require the family practice clerkship in the third year, there are substantial differences in the length of the clerkship. Two medical schools require an eight-week clerkship, three medical schools require a six-week clerkship, and four medical schools require a four-week clerkship.

The average number of family medicine clerkship sites is nine, with a range from 3 to 25. The medical school that reported 25 clerkship sites listed each community physician office as a separate clerkship site. Most of the family medicine sites have a capacity of less than 10 students. Six medical schools reported having one site with a capacity of 10 to 20 students, and one medical school reported having four sites with a capacity of 21 to 30 students (see Table 4).

^{*}Community sites/physician offices were reported as one site.

Internal Medicine

All Texas medical schools require their medical students to complete an internal medicine clerkship in their third year. However, there is some variation among the medical schools in the length of the internal medicine clerkship, which ranges from 8 to 12 weeks. Five medical schools reported a requirement for a 12-week internal medicine clerkship, one medical school reported a 10-week clerkship, and three reported an 8-week internal medicine clerkship.

The number of internal medicine clerkship sites varied from 2 to 43. One medical school reported that they have only two internal medicine clerkship sites, one site has a capacity of 10 to 20 students, and the other site has a capacity of 31 to 50 students. The one medical school that reported having 43 internal medicine clerkship sites stated that 40 of the sites had capacity for only one medical student. The majority of internal medicine clerkship sites have a capacity of less than 10. Eight medical schools have at least one site with a capacity of 10 to 20, three medical schools have at least one site with a capacity of 31 to 40, and one medical school reported having one site with a capacity of more than 50 (see Table 5).

Surgery

All Texas medical schools require a surgery clerkship for medical students in their third year. However, the number of weeks of the surgery clerkship ranges from 8 to 12, with six medical schools requiring 8 weeks, one requiring 10 weeks, and two medical schools requiring 12 weeks.

The average number of clinical sites for the surgery clerkship is nine, with the majority of sites having a capacity of less than 10 students. Five medical schools reported having at least one site with a capacity of between 10 to 20 students, three medical schools reported having at least one site with a capacity of 21 to 30, and two medical schools reported having at least one site with a capacity of 31 to 50 medical students.

Pediatrics

Eight Texas medical schools require the pediatric clerkship to be completed in the third year. One medical school allows its medical students to complete the clerkship in either the third or fourth year. Six of the medical schools offer an eight-week pediatric clerkship, while the remaining three offer a six-week pediatric clerkship.

The average number of clinical sites for the pediatric clerkship is seven, with the majority of pediatric clerkship sites having a capacity of fewer than 10 students. Seven Texas medical schools reported that they have at least one site that accepts 10 to 20 medical students per pediatric clerkship session. One medical school reported having a site that accepts between 21 to 30 students, and three medical schools reported having at least one clerkship site with a capacity of 31 to 50 (see Table 7).

Obstetrics and Gynecology

All Texas medical schools require medical students complete an obstetrics and gynecology clerkship. Eight of the schools require the clerkship in the third year of medical school, while one institution allows the clerkship to be completed in either the third or fourth year. Four medical schools have an eight-week obstetrics and gynecology clerkship, while five have a six-week clerkship.

The average number of obstetrics and gynecology clerkship sites at the Texas medical schools is eight, with a range of 3 to 18. The medical school reporting 18 clinical sites had some sites listed separately that were physician offices, which often had a capacity

of one. The majority of the sites have a capacity of less than 10, but five medical schools reported having at least one site with a capacity of 10 to 20. Three medical schools reported having one clerkship site with a capacity of 21 to 30, and one medical school reported having two clerkship sites with a capacity of 31 to 50 (see Table 8).

Neurology

Five medical schools require a four-week neurology clerkship. One medical school allows its students to complete the clerkship in either the third or fourth year, two medical schools require the clerkship in the third year, and two medical schools require the clerkship in the fourth year.

The medical schools reported an average of five clinical sites for the clerkship in neurology. Of the four medical schools that reported capacity and number of sites, all have at least three neurology clerkship sites with a capacity of less than ten, and two schools reported having one site with a capacity of 10 to 20 (see Table 9). One medical school did not provide site or student capacity data.

Scheduling and Supervision of Medical Students in Core Clerkships

Responsibility for scheduling the required third and fourth year clerkships for Texas medical students varies by medical school, with different offices responsible for scheduling students for specific clerkships. While the task is completed on an annual basis, each medical school varies in how it accomplishes scheduling the core clerkships. Most Texas medical schools rely on the Registrar, Student Affairs, Clinical Education or an equivalent office to schedule medical students' core clerkships. However, schools reported there is limited communication between departments/services and clinical sites.

In fall 2011, the various offices responsible for scheduling placed 1,626 third-year and 1,473 fourth-year medical students into core clerkships. Unlike other disciplines, the clinical component of medical education relies on supervision from physicians who are often responsible for multiple activities, including overseeing residents, medical students, and providing patient care services or procedures.

^{*}Community sites/physician offices were reported as one site.

Most Texas medical schools schedule third and fourth year medical students based on students' preferences and may also use a randomized lottery system to determine the clerkship schedule. Medical schools reported that they try to accommodate their students, but acknowledged that this was not always possible. Geographic proximity is considered when scheduling students; however, often students are scheduled to train at a variety of sites and must travel to multiple locations. This may result in students moving from one city to another or moving from one hospital to another.

When asked what determines the number of medical students sent to a particular required third or fourth year clerkship site, the medical school survey responses showed that the number of medical students sent to a particular clinical site depends on patient volume, type of learning environment (ambulatory clinic, hospital service, etc.), faculty teaching availability, clerkship resources at the site, and the number and type of other student learners at the site (residents, physician assistants, pharmacy students).

Each medial school is responsible for ensuring that all core clerkship sites offer students equivalent educational experiences. Several medical schools reported that due to increased class sizes, their medical students were experiencing more difficulty getting their preferred clerkship site. Also, some medical schools reported that their clinical sites were filled to maximum capacity during most of their rotations.

Supervision of medical students during their various clerkships at the clinical sites is the responsibility of a medical school faculty member, and Texas medical schools adhere to this requirement. However, at many clinical sites, in addition to medical school faculty, there are residents and on-site clerkship directors that also supervise medical students. Supervision of medical students is an accreditation requirement of the Liaison on Medical Education (LCME). Their policy states:

Supervision of medical student learning experiences at an institution that offers a medical education program must be provided throughout required clerkships (or, in Canada, clerkship rotations) by members of the institution's faculty.

Medical Students Completing a Core Clerkship at Each Site

Texas medical schools provided information about each clinical clerkship site along with the number of medical students that rotated through the sites in fiscal years 2009, 2010, and 2011. Staff averaged the number of medical students who completed a core clerkship to better understand whether existing sites were adding students. The average number of students completing a clerkship by each site varied substantially

from the smallest, with an average of six medical students, to clerkship sites that had an average of more than 100 students assigned to a clerkship site.

The total number of medical students enrolled in all years, including the third and fourth years, for fall 2011 is shown in Table 10. This table includes medical students who may be required to repeat a portion or an entire year or who took time off. In fall 2011, approximately 3,100 medical students were completing core clerkships and rotations during their third and fourth year.

Source: Coordinating Board, CBM 001

The information on the number of medical students who completed a core clerkship is limited to the core clerkships of psychiatry, family medicine, internal medicine, surgery, pediatrics, obstetrics/gynecology, and neurology. Staff analysis found that overall, three Texas medical schools increased the average number of students assigned to core clerkship sites. This reflects the increased medical school class size during the same time period.

Psychiatry

In 2011, the average number of medical students completing a psychiatry clerkship ranged by institution from 9 to 88 students per site. Two medical schools reported an increase in the average number of students, while four reported decreases in the average number of students completing a psychiatry clerkship by site from 2009 through 2011. Two medical schools reported no change in the number of medical students completing, and one medical school did not report, as it did not have students completing clerkships in 2009.

Family Medicine

In 2011, the average number of medical students completing a family medicine clerkship ranged by medical school from 6 to 66 medical students per site. Four medical schools reported an increase in the average number of students completing a family medicine clerkship by site from 2009 through 2011. Two medical schools reported a decrease in the average number of students completing a family medicine clerkship. Two medical schools had the same average number of students completing for 2009 and 2011. One medical school did not report since it did not have students completing clerkships in 2009, and another medical school did not report the number of students completing a family medicine clerkship by clinical site.

| Average | 5 | 40 | 38 | 49 | | | |

Note: El Paso has a Neurology rotation in their curriculum that students are required to complete in their fourth year of medical school. The data submitted identifies three sites that medical students can go to complete the neurology rotation, but data were not provided that identify the number of medical students that would rotate at each site.

Source: Institutional Reports.

Evaluation of Medical Students on Core Clerkships

Medical schools differ in how they evaluate students completing core clinical clerkships, but the majority of core clerkships require students to complete a written exam, which in most cases is a nationally standardized exam. In addition, faculty and in some instances residents, evaluate the students based on a clinical skills exam. The student is also evaluated by the faculty or resident by observation throughout the clerkship, and these observations are recorded on medical schools' assessment forms. The evaluation of the medical students during their core clerkships documents their development and progress in technical and clinical skills attainment.

^{*}Community sites/physician offices were reported as one site.

Financial Commitment to Core Clerkships

To assess the financial commitment the medical schools must invest to provide their students with clerkship experiences, the medical schools were asked to respond to the question:

Of the total required third and fourth year clerkship locations and sites, including hospitals, clinics, and other locations identified on the spreadsheet survey instrument, how many were paid (direct or indirect) by the medical school to accommodate these medical students in fiscal year 2011?

Among the nine medical schools, there was significant variation reported in their responses. Two medical schools reported that they paid sites to have their medical students. However, the schools varied in the number of sites they paid, with one reporting paying for four clinical sites and the other reporting paying for 88 clinical sites. The medical school that reported paying 88 clinical sites did not separate thirdand fourth-year clerkship sites and elective clerkship sites.

Four medical schools reported no third and fourth year clinical sites were paid to accommodate their medical students in fiscal year 2011. Of the remaining three medical schools, one reported that most clinical sites are provided financial assistance, but that the payment is not specifically linked to medical student access. Another medical school explained that "costs are embedded in an 'educational relative unit' formula, which is allocated to clinical departments based on faculty numbers, student numbers, length of clerkship, type of patient care environment, frequency of clerkship, etc." One medical school reported that they have a contract with their partners and that the payment is based on the placement of students.

When asked what the total amount of funding the medical schools paid in fiscal year 2011 to the clinical sites (hospitals, clinics, etc.) to accommodate medical students in required third and fourth year clerkships, various responses were received. The amount of funds provided to the clinical sites ranged from no payment to \$12.2 million. The institution that reported \$12.2 million in funding did not separate the total amount funded for only third and fourth year clerkships and elective rotations. The funding amounts were not separated because for a single clinical site funding was provided for all types of rotations.

Several factors contributed to the medical schools reporting such a wide range of amounts to their clinical sites. The medical schools have not previously been asked to

report this information and have not been required to formulate a uniform reporting methodology. Although the institutional representatives agreed on a methodology for reporting this information in the survey workgroup meeting, most of the institutions did not report the information in that manner. Due to the variation in the data submitted, it is not possible to draw any meaningful conclusions related to the payments made by medical schools to clerkship sites.

Selective/Elective Rotations

In addition to the required core clerkships, medical students must also complete selective and elective rotations. The medical students are required to complete a set number of weeks of selective and elective rotations. These rotations may vary in length from a week to six weeks. However, the most common is a four-week rotation.

If a selective/elective rotation is unavailable due to issues of space, the medical student has three options: find another time to do the rotation, choose to go off campus for the rotation, or select a different rotation. These options vary by medical school.

Six of the medical schools reported that funding was not generally provided to clinical sites that provided selective/elective rotations. Three medical schools reported some form of payment, with two schools referencing the overall payment to a particular site that encompassed core clerkships and rotations.

Selective Rotations

A selective rotation is a clinical experience in which the medical students choose from a limited list of rotations. The number of selective rotations varies by medical school. Selective rotations are completed in either the third and/or fourth year of medical school.

Eight of the nine Texas medical schools require students to complete selective rotations to graduate. The number students must complete varies by medical school, ranging from one to four selective rotations. To complete a selective rotation, a medical student first selects from a list of rotations, grouped by area, such as critical care or ambulatory medicine. The groupings also vary by medical school; however, the most common groupings include: critical care, sub-internship, and ambulatory medicine. Some medical schools offer medical students unique selective experiences, such as Alcohol and Drug Dependency Treatment, Primary Care Partnership, and Advanced Patient Care.

Elective Rotations

An elective rotation is a clinical experience most commonly completed during the fourth year of medical school and is selected by the medical student. Elective rotations are usually four to eight weeks in duration. Generally, medical students seek elective rotations in areas they are interested in exploring for their medical specialty. Some medical schools offer students hundreds of options for their elective rotations. Students also have the option of seeking electives at other medical schools and residency programs within and outside the state and abroad.

Texas medical schools vary in the number of elective rotations they require their students to complete, ranging from three to six electives. Most medical schools offer students approximately 10 weeks to pursue rotations in medical specialties. The elective rotations span the medical specialty range from primary care to subspecialty medicine.

Medical students learn about the variety of elective rotations through the schools' catalogs, and most elective rotations are listed on the schools' websites. Many of the medical schools provide students with a notice regarding availability of rotations and inform students how to submit applications. There is also a national interactive database maintained by the Association of American Medical Colleges that allows students to search for elective rotations in their home state, or other states.

The Texas medical schools provide an array of elective rotations that are sought by their medical students. Currently, medical students seem most interested in completing rotations in anesthesiology and radiology. However, interest often varies from year to year. Other competitive rotations include surgery-Intensive Care Unit, dermatology, orthopedics, and ophthalmology.

It is clear from the medical school responses that not all medical students get to pursue their first choice of elective rotation. All medical schools reported that students have to reschedule or get on waiting lists if they are unable to obtain their preferred rotation. One medical school reported that their anesthesiology rotation is sought after, and students are prepared to seek an alternative choice, as space is so limited. Another school reported difficulty in having students complete emergency medicine rotations, due to space; the school encouraged students to seek these rotations at other medical schools, including those out of the state.

For the majority of medical schools, medical students are evaluated on their selective/elective rotations, through standardized evaluations and assessments. For

selective/elective rotations, faculty are responsible for supervising the medical student. In addition to faculty, depending on the institution and rotation, there may be others involved in the supervision of the medical student, including attending physicians, residents or fellows. Most Texas medical schools indicated that students also evaluate faculty supervision upon completion of the rotation. One school indicated that elective rotations were completed on a pass/fail system.

If a student wishes to complete an elective rotation out-of-state, they most commonly complete a visiting student application. This is the case whether the student is remaining in state or goes out of state to complete a rotation.

Most Texas medical school students use the Visiting Student Application Service (VSAS) to schedule rotations away from their home medical school. The VSAS is administered by the American Association of Medical Colleges (AAMC) and provides a service that facilitates medical students in participating in elective rotations at LCME-accredited medical schools.

For rotation sites that do not participate in VSAS, there are different processes at each of the Texas medical schools to arrange away elective rotations for their medical students. The majority of medical schools reported that medical students are aided by the Office of Student Affairs, or an equivalent office in scheduling away rotations.

Texas Medical Students Who Complete an Elective Rotation Away from Their School

A few Texas medical schools reported more than 50 percent of their students completed an out-of-state elective rotation; however, five medical schools reported that between 32 and 50 percent of their students participated in an out-of-state elective rotation. These medical schools reported that their students went to the following states: Massachusetts, Ohio, Colorado, Pennsylvania, California, New York, Illinois, Louisiana, Kansas, Missouri, Tennessee, Oklahoma, Florida, South Carolina, New Mexico, Utah, Arizona, Minnesota, North Carolina, Oregon, and Washington.

The majority of Texas medical schools require students participating in an away rotation have the supervising faculty complete the home institution's evaluation form. However, a few Texas medical schools will accept the evaluation form of the away rotation. A few Texas medical schools reported that they would not award credit for the rotation to the medical student if the home medical school's evaluation form was not completed.

Texas medical students participate in rotations away from their medical schools and attend throughout the country and the world. Several of the medical schools provided extensive lists of locations where their students complete rotations (see Appendix D).

Medical Students Visiting Texas Medical Schools

Medical students are encouraged to seek experiences in their final year of formal education at medical schools across the state and nation. Medical students "visit" other campuses, often in other states for approximately eight weeks. These visits allow medical students to finalize their future medical specialty choices and explore locations in which they might "match" for their residency training. This "matching" is unique to medicine, with fourth year medical students contractually obligating themselves in their fourth year to training in a particular medical specialty and prioritizing the locations of the residency training. Generally, medical students may not interview for a residency position while on an elective rotation, though most medical students use the rotations to evaluate their interest in the specialty as well as the location and site.

Eight Texas medical schools accept visiting medical students, with all eight accepting visiting students from LCME-accredited schools. However, some Texas medical schools have additional criteria that the visiting student must meet. For example, one medical school requires that in addition to being from an accredited LCME medical school, the student must also have completed all core clerkships and passed the United States Medical Licensing Exam (USMLE) Step 1.

The Texas medical schools that accept visiting medical students who are enrolled at an accredited LCME or osteopathic medical school use VSAS application. From 2009 to 2011, the number of visiting students at Texas medical schools increased 28 percent; however, 2010 had the highest number of visiting students for the three-year period (see Table 18).

| Table 18. Medical Students Visiting Texas Medical Schools (2009-2011) | | | | | | | |

UNTHSC TCOM:

Does not accept visiting students.

N/A: Data not provided. Source: Institutional Reports.

Each Texas medical school has policies in place that set the school's protocol related to the number of rotations that a visiting medical student may complete. The number of rotations in which a visiting medical student may participate ranged from one to three rotations, with two rotations the most common. However, one medical school reported that in special circumstances a visiting medical student may rotate up to 20 weeks at the medical school; if the student is completing four-week rotations, this would total five rotations.

The medical schools reported that visiting medical students are mostly from other Texas medical schools or other U.S. states. Visiting students are supervised by faculty (clinical or adjunct) or by the attending physician. The supervision is the same for visiting students as for students from the institution.

Five Texas medical schools reported accepting visiting medical students from international medical schools that are not accredited by the LCME. One medical school did not indicate if they accepted international visiting medical students, and a few schools explained that they accept international medical students if they have an agreement or relationship with the international school. Other schools responded that they allow international visiting medical students if they meet the necessary requirements. Of those that accept international visiting medical students, each medical school reported having a unique acceptance process.

Texas medical schools that accept visiting medical students varied in the type of rotations that visiting medical students are allowed to complete. Some medical schools allow visiting students to participate in any rotation as long as there is availability. Other Texas medical schools have a set list of specific electives or departments that accept visiting students. Several of the Texas medical schools do not allow visiting students to complete third or fourth year core clerkships.

Adding Core Clerkship and Rotation Sites

Medical schools have additional accreditation requirements if they add core clerkships. The new site must, "provide faculty and resources that allow for the LCME mandated comparable clinical experiences of the core clerkship." This is not the case for adding elective rotations, as they are not required to be comparable across sites. New core clerkship sites must have formal signed affiliation agreements, approval of the medical school's curriculum committee, and faculty with a medical school appointment. If any of these are missing, the clinical site would be considered an "away" or non-medical school affiliated elective.

In addition to ensuring educational equivalency, potential inpatient and outpatient affiliates must be identified. Patient census data are reviewed. Local leadership for courses, student services and affairs, and campus administration are identified. Physical facilities need to include student space and classrooms. Once infrastructure is in place, LCME approval must be obtained by filing appropriate paperwork for a new campus site and an LCME site visit.

One medical school provided an example of the steps required for approval of offcampus clinical sites.

Steps required for approval of off-campus clinical clerkship/rotations:

- Discussions with the site determining if both parties would like to establish a relationship.
- Negotiations of responsibilities, whether compensation is needed.
- Proposal, negotiation, agreement, and execution of an affiliation agreement.
- Assignment of a site director.
- Faculty development of the site director for needed administration tasks
 (assignment of students to teams, communication with faculty on
 assignments, distribution of evaluation instruments, scheduling of lectures,
 distribution of course evaluations, collection of student and course
 evaluations, faculty development if concerns, etc.). This may take several
 months to years.

- Designation of faculty.
- Agreement about responsibilities for supervision, teaching (whether core lectures will be conducted at the site, which, etc.).
- Faculty development of faculty at the site (course objectives, lectures needed, level of supervision, patient logs, need for midpoint and final feedback, how to assess students' achievement of the learning objectives, etc.).
- Routine site visits to determine quality of teaching, student satisfaction, provide guidance and additional faculty development as needed.

Medical School Expansions and Other Information

The medical schools were asked to provide additional information that would provide insight into clinical education capacity. Several Texas medical schools responded and acknowledged they were planning increases in their first-year entering class sizes, including TAMU, TTUHSC – El Paso, and UNTHSC. If the medical school planned to increase its first-year entering class size, they were asked how they planned for the clinical placements of the additional medical students. One medical school responded that since they were already at the maximum capacity for enrollment, students no longer had as much choice to pursue a variety of clinical rotations.

One medical school stated that if additional students, such as international medical school students, were able to enter existing clinical sites, because they were able to pay more to the site, it would place strain on the medical school's ability to meet the educational needs of their current students and would be difficult to maintain accreditation.

Several medical schools reported that adding clinical sites is a complex, staff intensive, and time sensitive process. One medical school indicated that in the current health care environment, the loss of a clinical site is something all schools must plan for. The school noted that the medical schools must plan to be flexible since changes to hospital leadership, medical school affiliation, and the real threat of natural disasters may potentially affect the school's ability to place students in clinical sites.

One medical school responded that as class sizes increase for both medical students and students in mid-level provider programs, they were working to develop new opportunities for clerkships. Additionally, with the growing recognition of the need for entry-level graduate medical education positions, there was consensus that even though the need for additional first-year residents was evident, the result would likely displace medical students and others currently training in clinical sites.

One medical school reported a concern for the existing Physician Assistant (PA) programs, recognizing that PA students are required to be educated alongside medical students and residents. The longstanding tradition for meeting PA requirements has been for PA students to complete clinical rotations with medical students, PharmD students, and students pursuing other health professions. The response suggested that the increase in medical school enrollments would displace PA students to other clinical settings, often with fewer opportunities to learn in inter-professional teams.

Findings

Texas medical students are required to complete specific clinical education experiences; however, requirements vary by medical school. This includes variations in the length of the clinical experiences, usually in the number of weeks required; the number of clinical sites available; and the number of medical students assigned to each site.

Texas medical schools have developed strong and long-term relationships with teaching hospitals that provide the majority of clinical sites used by the medical schools for their students' clinical clerkships and rotations.

Texas medical schools' relationships with teaching hospitals are fluid; the clinical experiences available change based on student demand and needs, faculty availability, other health professions use of the site, and patient load.

The medical schools and teaching hospitals negotiate agreements that include, but are not limited to, the number of medical students that will complete a clinical experience at the teaching hospital.

Teaching hospitals and clinical sites, including physician offices, may allow medical students from more than one medical school to rotate through their clinics and services.

From 2009 through 2011, the average number of students medical schools placed into core clerkships increased at three medical schools to accommodate the state's increased medical student enrollments. Four Texas medical schools were responsible for 80 percent of the increase in Texas medical school enrollments.

Based on eight Texas medical schools' responses, an estimated 42 percent of medical students from those schools leave the state to complete clinical elective rotations. These experiences allow medical students to explore their potential medical specialty choices and better understand the available residency opportunities.

From 2009 to 2011, the number of visiting students at Texas medical schools increased 28 percent; however, 2010 had the highest number of visiting students (1,099) for the

three-year period. These students complete between four weeks and 20 weeks of clinical experiences in Texas.

The medical schools do not publish or report financial information related to the cost of educating a medical student at a clinical site. Three Texas medical schools reported paying their clinical sites to allow their medical students to obtain their required and elective clinical experiences. The amounts ranged by school from \$300,000 to \$12.2 million. Two medical schools reported that payment for medical students was included in an institutional payment to their teaching partner, but did not provide specific amounts. Four medical schools reported that they did not pay their clinical partners.

Due to the limited number of medical schools that reported payment information related to clinical education and the wide range of the amounts reported by a few medical schools, it is not possible to draw any meaningful conclusions related to the payments made by medical schools to clerkship sites.

Recommendations

Additional medical schools should not be established or opened until the number of first-year physician residency positions exceeds the number of graduating medical student by 10 percent.

Existing medical schools should not increase their entering medical student enrollment, until the number of first-year physician residency positions exceeds the number of graduating medical students by 10 percent.

Texas medical schools should increase capacity of existing residency programs, which would allow additional medical students to train at the sites. Priority should be given to residency programs that accept first-year entering residents.

Texas medical schools should collaborate and work to develop new residency programs that accept first-year medical residents, and once developed, could serve as clinical sites for medical students.

Texas medical schools should work to develop greater transparency in financial information regarding the cost of medical students' clinical education.

Texas medical schools should collaborate and establish a uniform reporting structure that will help students, consumers, and policymakers better understand the cost of medical education.

Re: Request for legal opinion regarding the Texas Higher Education Coordinating Board's authority to grant a certificate of authority to a foreign school, including a foreign medical school, under Texas Education Code § 61.306

Dear General Abbott:

The Texas Higher Education Coordinating Board ("THECB" or "Coordinating Board") seeks your assistance in interpreting Subchapter G of Chapter 61 of the Texas Education Code, and, more specifically, Section 61.306 of that subchapter. The question that we seek to resolve is whether THECB has authority to grant a certificate of authority to a foreign school, including a foreign medical school, under Section 61.306. That section provides:

ISSUANCE OF CERTIFICATE. (a) The board may issue a certificate of authority to grant a degree or degrees and to enroll students for courses which may be applicable toward a degree if it finds that the applicant meets the standards established by the board for certification.

(b) A certificate of authority to grant a degree or degrees is valid for a period of two years from the date of issuance.

Background

Subchapter G ("Regulation of Private Postsecondary Educational Institutions") of Chapter 61 of the Texas Education Code requires, *inter alia*, that every "private postsecondary educational institution" apply for and be granted a certificate of authority from THECB in order to offer courses or award degrees. Tex. Educ. Code §§ 61.304-306. "Private postsecondary educational institution" means an educational institution which: is not an institution of higher education as defined by Section 61.003 of the Education Code; is incorporated under the laws of Texas, maintains a place of business in Texas, has a representative present in Texas, or solicits business in Texas; and

Hon. Greg Abbott May 21, 2012 Page 2 of 10

furnishes or offers to furnish courses of instruction in person, by electronic media, or by correspondence leading to a degree or providing credits alleged to be applicable to a degree. Tex. Educ. Code § 61.302(2).

Institutions which are fully accredited by a recognized accrediting agency or which have received approval by a state agency authorizing the institution's graduates to take a professional or vocational state licensing examination administered by that agency are exempt from Subchapter G. Tex. Educ. Code § 61.303(a).

A certificate of authority granted under Subchapter G is valid for a 2-year period; an institution must apply to renew its certificate in order to continue offering courses and awarding degrees after that period. Tex. Educ. Code § 61.306(b), § 61.308. The THECB rule discussing certificates of authority is located at 19 T.A.C. § 7.8 ("Institutions Not Accredited by a Board Recognized Accreditor").

The American University of the Caribbean ("AUC"), a for-profit medical school located in St. Maarten, Netherlands Antilles, is currently seeking approval from THECB for a certificate of authority to offer courses leading to a first professional degree in medicine. AUC seeks to offer clerkships, which are required during years three and four of the medical program, to AUC students at Texas hospitals under affiliation agreements it proposes to attempt to negotiate. AUC has followed the procedures required by Tex. Educ. Code § 61.305 and 19 T.A.C. § 7.8 for application for a certificate of authority. In November 2011, following an on-site evaluation of AUC by external consultants, THECB's Certification Advisory Council¹ recommended that AUC be approved for a certificate of authority.

On April 25, 2012, THECB held its quarterly board meeting, and Agenda Item VIII-J concerned the consideration of AUC's request for a certificate of authority to offer courses in Texas leading to a medical degree. Exhibit A, Supplemental Material for Agenda Item VIII-J from April 2012 THECB Board Meeting. Due to concerns raised at the Board meeting regarding whether THECB has statutory authority to grant a certificate of authority to any foreign school, including a foreign medical school such as AUC, the Board members passed, in pertinent part, the following motion:

Given the uncertainty regarding whether the Coordinating Board has sufficient statutory authority to grant a Certificate of Authority to any foreign school, including a foreign medical school, and given certain of the other issues raised by this application from AUC, I move that we seek

¹ See Tex. Educ. Code § 61.314 ("Advisory Council on Private Postsecondary Educational Institutions").

AN EQUAL OPPORTUNITY EMPLOYER

Hon. Greg Abbott May 21, 2012 Page 3 of 10

an opinion from the Attorney General as to the extent of our authority as a Board in this area of the law.

As a result, THECB now seeks an opinion from the Attorney General regarding THECB's authority to grant a certificate of authority to a foreign school, including a foreign medical school.

Discussion

From a review of the purpose underpinning the creation of THECB and the legislative history of Subchapter G of Chapter 61 of the Texas Education Code, THECB appears to have authority to grant certificates of authority to both medical schools and foreign schools, including foreign medical schools.

The purpose of Chapter 61 ("Texas Higher Education Coordinating Board") of the Texas Education Code, which created THECB in 1965, is as follows:

- (a) The purpose of this chapter is to establish in the field of public higher education in the State of Texas an agency to provide leadership and coordination for the Texas higher education system, institutions, and governing boards, to the end that the State of Texas may achieve excellence for college education of its youth through the efficient and effective utilization and concentration of all available resources and the elimination of costly duplication in program offerings, faculties, and physical plants.
- (b) In the exercise of its leadership role, the Texas Higher Education Coordinating Board established by this chapter shall be an advocate for the provision of adequate resources and sufficient authority to institutions of higher education so that such institutions may realize, within their prescribed role and scope, their full potential to the benefit of the students who attend such institutions and to the benefit of the citizens of the state in terms of the realization of the benefits of an educated populace.

Tex. Educ. Code § 61.002.

Ten years later, the Texas Legislature significantly expanded the duties and authority of THECB. Subchapter G of Chapter 61 was added by H.B. 1538 in 1975 (64th Leg., R.S.). Exhibit B, Enrolled Version of H.B. 1538. This 1975 legislation, in relevant part, required every "private institution of higher education" to receive a certificate of authority from THECB in order to enroll students, offer courses, or award degrees. "Private institution of higher education" was defined as an educational institution which:

- (A) is not an institution of higher education as defined by Section 61.003(7) of [the Education] code;
- (B) is incorporated under the laws of this state, or maintains a place of business in this state, or solicits business in this state; and
- (C) furnishes or offers to furnish courses of instruction in person or by correspondence leading to a degree or providing credits alleged to be applicable to a degree.

Exhibit B at p. 2. "Degree" was (and still is) defined as:

[A]ny title or designation, mark, abbreviation, appellation, or series of letters or words, including associate, bachelor's, master's, **doctor's**, and their equivalents, which signifies, purports to, or is generally taken to signify satisfactory completion of the requirements of all or part of a program of study leading to an associate, bachelor's, master's, or **doctor's** degree or its equivalent.

Id. (emphasis added); Tex. Educ. Code § 61.302(1). Included in the "exemptions" from Subchapter G were institutions "whose graduates are subject to licensure by an agency of the State of Texas prior to their engaging in professions directly related to their course of study." Exhibit B at p. 3.

The legislative history behind H.B. 1538 makes clear that all private postsecondary educational institutions – including those offering post-baccalaureate degrees – were meant to be encompassed by the certificate of authority process. For example, the 1975 House Committee on Higher Education's Bill Analysis noted as follows:

Background Information:

Accompanying the increasing use of off-campus instruction, credit by examination, college-without-walls arrangements, etc. has come the proliferation of operations which are often called degree mills or diploma mills. It has been estimated that the number of diploma mill institutions has increased by three times over the last eight years. The term "degree mill" refers to operations which confer degrees without substance in return for the payment of a fee and few, if any, other requirements.

Two situations have happened lately in Texas regarding diploma mills, one in Dallas and the other in San Antonio. In 1974 the Texas Attorney General brought action against Dallas State College for selling degrees in more than 50 subject areas at a cost of from \$75 for a high

Hon. Greg Abbott May 21, 2012 Page 5 of 10

school diploma to \$180 for a doctorate. ² All calls to the institution were taken by an answering service.

The San Antonio based Southwestern Institute of Management contracted with Indiana Northern University of Gas City, Indiana to offer a graduate degree in management to students until it was learned that the Indiana based school was not accredited.

In 1970, 30 states had no regulations governing the establishment of colleges. In the last five years, 14 states have adopted some type of legislation to control the offering of courses of degrees within their state.

What the Bill Proposes to Do:

Establish rules, regulations, and penalties for degree granting institutions offering courses in Texas.

Exhibit C, Bill Analysis for H.B. 1538, at p. 1 (emphasis added). Thus, H.B. 1538 clearly contemplated that Subchapter G would regulate all private "degree granting institutions offering courses in Texas," including those institutions offering post-baccalaureate degrees such as graduate degrees and doctorates, which are specifically mentioned in the Bill Analysis. However, as noted above, professional schools such as law schools and medical schools whose graduates must be state-licensed prior to engaging in professions directly related to their course of study were exempted from Subchapter G in the 1975 legislation.

In 1985 (69th Leg., R.S.), Subchapter G was amended by H.B. 934,³ in part to eliminate the exemption for professional institutions whose graduates must be statelicensed prior to engaging in professions directly related to their course of study and subject these institutions to the certificate of authority process. The Bill Analysis by the House Committee on Higher Education noted as follows:

Existing law allows unaccredited medical and law schools, among others, to operate legally in Texas without being subject to consumer protection laws to prevent degree-mill operations in the state. The proposed bill is intended to provide that schools now exempted from the law would become subject to some type of educational quality controls. The legislation would amend Coordinating Board statutes to eliminate exceptions from state purview which now apply to schools whose graduates are subject to state licensure. Because of this provision,

² At the time that H.B. 1538 was being considered by the Senate Education Committee, there was an injunction against Dallas State College in connection with these activities. *Hearing on H.B. 1538 Before the Sen. Educ. Comm.*, 64th Leg., Reg. Sess. (Tex. May 23, 1975) (statement of Dr. Norma Foreman, Coordinating Board employee). The Senate audio tapes for the 64th Leg., R.S., are located at https://www.tsl.state.tx.us/ref/senatetapes/64/index.html.

³ Exhibit D, Enrolled Version of H.B. 934.

Hon. Greg Abbott May 21, 2012 Page 6 of 10

the state has been unable to question the operation of possible substandard professional schools.

Exhibit E, House Committee on Higher Education Bill Analysis for H.B. 934 (emphasis added). The motivation to eliminate this exemption was driven in large part by the operation in El Paso of a branch facility of a Caribbean medical school, St. Lucia. As the Senate's Bill Analysis noted:

Certain unaccredited professional schools (e.g. private medical or law schools) currently are not subject to any type of quality standards because of provisions in the law which exempt from state regulation any schools whose graduates are subject to state licensure. Concerns have been raised by the attorney general's office and the Coordinating Board over the operation in El Paso of a Caribbean medical school branch facility.

Senate Bill 691⁴ prohibits any private unaccredited institution from operating in the state without Coordinating Board certification unless the state licensing agency for that profession has approved the school; gives the Coordinating Board authority to regulate any private institution broadcasting courses in the state, if a representative of the school is present in the state....

Exhibit F, Senate Bill Analysis for H.B. 934 (emphasis added). The Senate Committee on Education's Fiscal Note for S.B. 691 noted that "[t]he bill would clarify the authority of the Coordinating Board to regulate private institutions from out-of-state or in-state that offers courses or programs with credit toward a degree or is named 'college' or 'university'." Exhibit G, Senate Fiscal Note for S.B. 691.

In introducing H.B. 934 and outlining its purposes for the House Committee on Higher Education, the bill's sponsor, Representative Wilhelmina Delco, discussed closing the loophole in Subchapter G for professional schools and giving the Coordinating Board review authority over those institutions, including foreign institutions:

House Bill 934 is a bill that has been filed in an effort to recognize and deal with what has become a problem in our state.

Existing law currently allows unaccredited medical and law schools among others to operate legally in Texas without being subject to consumer protection laws to prevent degree-mill operations.

The proposed bill is intended to provide that schools now exempted from the law would become subject to some type of educational quality

⁴ S.B. 691 was the companion (identical) to H.B. 934, and H.B. 934 was considered in lieu of S.B. 691.

AN EQUAL OPPORTUNITY EMPLOYER

Hon. Greg Abbott May 21, 2012 Page 7 of 10

controls. The legislation would amend Coordinating Board statutes to eliminate exceptions from state purview which now apply to schools whose graduates are subject to state licensure. Because of this provision, the state has been unable to question the operation of possible substandard professional schools.

It is particularly important for us to recognize that this is a consumer protection bill. A lot of you have been aware recently of articles in the paper where some operations that are not under the authority of the Coordinating Board have been able to mislead our citizens into believing that the programs offered and, in some instances, accredited in other states or foreign countries, are available and operative in Texas.

We feel that that is perfectly legitimate as long as there is some ability of our state and our Coordinating Board to make sure that these programs are accurately represented to our citizens. And that's what this bill does. It extends the review authority to all private institutions and to those entities that say to Texas citizens that if you come to us, you're getting bona fide, legal, and acceptable education.

Hearing on H.B. 934 Before the House Comm. on Higher Educ., 69th Leg., Reg. Sess. (Tex. Mar. 18, 1985) (statement of Rep. Wilhelmina Delco, H.B. 934 Sponsor and Chair, House Comm. on Higher Educ.). Representative Delco also mentioned St. Lucia Medical School in her discussion of H.B. 934 on the House floor:

House Bill 934 is an effort to close another loophole in the law that has permitted degree mills to operate in Texas. It does a number of things. First of all, it would say that those private institutions that currently are exempt from the law simply because the person who graduates must take some kind of licensure exam would not be able to perpetuate the fraud that would allow students to attend the schools and then not be able to pass the exams. We have as an example of this, an institution in the state that is supposed to be a medical school, that doesn't even have laboratories. So we're concerned about it....

Second Reading of H.B. 934 on House Floor, 69th Leg., Reg. Sess. (Tex. Mar. 27, 1985) (statement of Rep. Wilhelmina Delco) (emphasis added).

Similarly, an exchange during a hearing before the House Committee on Higher Education between a committee member and the Chair of THECB (Hon. Larry Temple) makes clear that the intent of H.B. 934 was to subject foreign schools, including foreign medical schools such as St. Lucia, to THECB authority under Subchapter G:

⁵ House audio tapes are located at the John H. Reagan Building, 105 W. 15th St., Room 330, Austin, Texas 78701.

Hon. Greg Abbott May 21, 2012 Page 8 of 10

Rep. Saunders: Mr. Temple, these so-called "outlaw schools," or, I guess we could call them schools, are they mostly out-of-state?

Mr. Larry Temple: The one that we primarily have been concerned about and tried to get a handle on and couldn't is a medical school based in the Caribbean, St. Lucia, in El Paso, and we worked with the Attorney General to try to come up with a way to get them under the purview so that they could really have somebody give scrutiny to them. And under the present law we can't do that. And the one that, as I say, we primarily have looked at, is an offshore-based institution.

Hearing on H.B. 934 Before the House Comm. on Higher Educ., 69th Leg., Reg. Sess. (Tex. Mar. 18, 1985) (statements of Rep. Robert Saunders, Member, House Comm. on Higher Educ., and Mr. Larry Temple, Chair, THECB) (emphasis added).

The Executive Director of the Texas State Board of Medical Examiners also described H.B. 934 as subjecting foreign medical schools to THECB authority:

Those of us that are interested in health affairs in Texas are primarily concerned with the quality of health that is provided to our citizens. We've been very concerned about the quality of some schools, particularly in the Caribbean, and particularly in that one out in El Paso. I have been talking to Ken[neth Ashworth, Commissioner of Higher Education] a long time about this. We've been to a number of legislators about this. We think this is very important legislation. And the effect of it would help us provide assurance that those men and women that are practicing in Texas are well-qualified and will deliver good medicine to our citizens.

Hearing on H.B. 934 Before the House Comm. on Higher Educ., 69th Leg., Reg. Sess. (Tex. Mar. 18, 1985) (statement of Dr. J.D. Brindley, Exec. Dir. of the Tex. State Bd. of Med. Examiners) (emphasis added).

Likewise, in H.B. 934's introduction before the Senate Education Committee, Senator Chet Edwards made clear that the bill was designed to make professional institutions, such as St. Lucia, subject to Subchapter G:

[T]he primary idea of House Bill 934 is to do away with a loophole we presently have in the law. If you are a private professional school and your profession might be licensed by the state, the Coordinating Board has absolutely no authority over that private professional school. As a consequence, we've had St. Lucia Medical School established in El Paso. This is a branch of a Caribbean, West Indies medical school. It's in El Paso, they operate out of the top floor of a former elementary school, they have no laboratories, and just three small classrooms where 60 students study. These students cannot even begin to

Hon. Greg Abbott May 21, 2012 Page 9 of 10

pass a medical examination in Texas to be certified as a physician, what they have done is go to other states such as Montana where no certification test is required and they put themselves out to be doctors. I think it's a discredit to this state when we have people graduating from such a school.

We need some legislative and Coordinating Board oversight of these kinds of schools, and so our bill would basically close that loophole to give the Coordinating Board authority over private professional schools where those professions might later be licensed....

Hearing on H.B. 934 Before the Sen. Educ. Comm., 69th Leg., Reg. Sess. (Tex. Apr. 3, 1985) (statement of Sen. Chet Edwards, Member, Sen. Educ. Comm.) (emphasis added). Senator Edwards later discussed H.B. 934 on the Senate floor as follows:

[HB 934] is designed to close a loophole under present law through which universities established by other nations can be created in Texas with no licensing, no approval procedures. The harm of the present policy is that there is a particular Caribbean nation that has set up a sham medical school in the West Texas/El Paso area and as a result of that we are trying to pass this legislation to keep those types of sham operations from operating in Texas....

Second Reading of H.B. 934 on Senate Floor, 69th Leg., Reg. Sess. (Tex. Apr. 22, 1985) (statement of Sen. Chet Edwards).

Due to the concerns regarding unregulated professional schools, H.B. 934 removed the exemption regarding institutions whose graduates were subject to licensure by a state agency prior to engaging in professions directly related to their course of study. The new exemption instead exempted from the requirement of receiving a certificate of authority:

[A]n institution or degree program that has received approval by a state agency authorizing the institution's graduates to take a professional or vocational state licensing examination administered by that agency. The granting of permission by a state agency to a graduate of an institution to take a licensing examination does not by itself constitute approval of the institution or degree program required for an exemption under this subsection.

Exhibit D at p. 2 (emphasis added). The exemption continues to read this way. Tex. Educ. Code § 61.303(a).

⁶ Senate audio tapes are located in the reference section of the Lorenzo de Zavala State Archives and Library Building, 1201 Brazos St., Austin, Texas 78701.

AN EQUAL OPPORTUNITY EMPLOYER

Hon. Greg Abbott May 21, 2012 Page 10 of 10

Possibly due to the concerns regarding the operation in El Paso of a Caribbean medical school branch facility, H.B. 934 amended Subchapter G to add "has a representative present in this state" to the definition of "private institution of higher education," resulting in its definition (in part) as an institution that "is incorporated under the laws of this state, maintains a place of business in this state, has a representative present in this state, or solicits business in this state." The definition continues to read this way (with the exception of "private institution of higher education" being changed to "private postsecondary educational institution"). Tex. Educ. Code § 61.302(2)(B).

Accordingly, in view of the legislative history surrounding H.B. 934, it appears clear that THECB's authority to grant certificates of authority extends to medical schools as well as foreign schools, including foreign medical schools.

Finally, in 1997 (75th Leg., R.S.), Section 61.313 of Subchapter G was amended by S.B. 1826 to add "seminary," "school of medicine," "medical school," "health science center," "school of law," "law school," and "law center" to "college" and "university" as terms that cannot be used in the official name of a nonexempt private postsecondary educational institution unless it has been issued a certificate of authority under Subchapter G. Exhibit H, Enrolled Version of S.B. 1826, at p. 4. Section 61.313 continues to read this way. Tex. Educ. Code § 61.313(a). If THECB did not have authority to issue a certificate of authority to a medical school, the addition of "school of medicine," "medical school," and "health science center" to the list of protected terms would not have been necessary.

Based upon the above analysis, THECB clearly appears to have authority to grant a certificate of authority to a foreign medical school under Texas Education Code Section 61.306.

THECB hereby requests, pursuant to Section 402.042 of the Government Code, that you issue an opinion on this question.

Thank you very much for your assistance in this matter.

Paredi

Very truly yours,

Raymund A. Paredes

⁷ As noted, the 1997 legislation added "seminary" to the list of protected terms in Section 61.313(a). However, in 2007, the Texas Supreme Court held that sections 61.304 and 61.313(a) of the Texas Education Code violated the Establishment Clause of the First Amendment to the U.S. Constitution as applied to a religious institution's programs of religious instruction. *HEB Ministries, Inc. v. Tex. Higher Educ. Coordinating Bd.*, 235 S.W.3d 627, 649 (Tex. 2007).

Texas Higher Education Coordinating Board

Survey of Texas Undergraduate Medical Education Required Clerkship and Selective/Elective Rotations Understanding Capacity at Clinical Sites

September 17, 2012

Institutional Spreadsheet – Third and Fourth Year Required Clerkships and Selective/Elective Rotations, Clinical Sites

An institution specific spreadsheet is attached separately for your institutional official to complete. The spreadsheet includes four worksheets/tabs: Required 3rd & 4th Year Clerkships, Selective/Elective Rotation, Visiting Students, and Other Students Rotating. Please complete all four worksheets and add additional rows as needed.

The data collected from the spreadsheet will be included in the Coordinating Board's report on Undergraduate Medical Education.

General Information – Open Ended Questions

Please complete the following questions and add space as you need. However, please address only the question asked. The information provided will be aggregated by Coordinating Board staff and included in the report. Institution specific information will not be included in the report. If you have questions, please contact Elizabeth Mayer via email at elizabeth.mayer@thecb.state.tx.us.

Required Third and Fourth Year Clerkships

- 1. Who is responsible for scheduling the required third and fourth year medical student clerkships for the medical students?
- 2. What is the current scheduling process for the third and fourth year medical students? Do the medical students provide preferences for their third and fourth clerkships?
- 3. What determines the number of medical students sent to a particular required third or fourth year clerkship site?

- 4. Who supervises the medical students at each of the required third and fourth year clerkship sites?
- 5. How are medical students evaluated on their required third and fourth year clerkships?
- 6. Of the total required third and fourth year clerkship locations and sites (hospitals, clinics, etc.) identified on the spreadsheet survey instrument, how many were paid (direct or indirect) by the medical school to accommodate these medical students in fiscal year 2011?
- 7. What is the total amount of funding your institution provided in fiscal year 2011 to the clinical sites (hospitals, clinics, etc.) to accommodate medical students in required third and fourth year clerkships?

Selective/Elective Rotations

- 1. What selective/elective rotations are available for your medical students? If you choose, you may attach a document that has all available selective/elective rotations that are available to your medical students.
- 2. Which rotations are selective?
- 3. How many selective rotations are medical students required to complete?
- 4. How many elective rotations are medical students required to complete?
- 5. How do medical students learn about the availability of selective/elective rotations?
- 6. Which selective/elective are most sought by your medical students?
- 7. What happens when there is not enough space to accommodate a medical student on a selective/elective rotation? Which selective/elective rotations are competitive?

- 8. How are medical students evaluated on their selective/elective rotations?
- 9. What are the supervision/faculty requirements for selective/elective rotations? How are supervisors/faculty evaluated?
- 10. If a student wishes to complete an elective rotation out-of-state, what is the process they must use to arrange it?
- 11. What percent of your students complete an out-of-state elective rotation?
- 12. How is the student evaluated on an out-of-state elective rotation?
- 13. Where do your students go for out-of-state rotations? What are the most common locations and rotations?
- 14. Of the total selective/elective rotation locations and sites (hospitals, clinics, etc.) identified on the spreadsheet survey instrument, how many were paid (directly or indirectly) by the medical school to accommodate these medical students in fiscal year 2011?
- 15. What is the total amount of funding your institution provided in fiscal year 2011 to the clinical sites (hospitals, clinics, etc.) to accommodate the selective/elective rotations?

Visiting Medical Students

- 1. Does your institution accept visiting medical students?
- 2. On what criteria does your institution evaluate and accept the institution from which the visiting medical student comes? (i.e. LCME, international medical schools, etc.)
- 3. Which rotations are visiting medical students allowed to complete?

- 4. Is there a limit on the number of rotations that a visiting medical student can participate at your institution? If yes, how many rotations can a visiting medical student complete?
- 5. What is the application process for a visiting medical student?
- 6. Where are visiting medical students coming from (medical school and state/country) to attend your institution's clinical rotations? Who supervises the visiting medical students?

Other Questions

- 1. Several Texas medical schools increased their first-year entering class sizes, including TAMU, TTUHSC El Paso, and UNTHSC. If your institution increased its first-year entering class size, how did your institution plan for clinical placements of the additional medical students? (Please provide a brief narrative with an estimated timeline.)
- 2. What limitations are there in increasing the number of medical student positions at a particular location or clinical site?
- 3. What is the process to add a new clinical site for medical students to complete a required third or fourth year clerkship or selective/election rotation?
- 4. Other thoughts or comments:

Required in 3rd Year? Required in 4th Year?

Selective/Elective Rotation

Selective/Elective Rotation Location

*The list below includes the selective/elective options as well as the various locations for the rotations, including out-of-state locations.

Selectives

Specialty Internal Medicine: A student must complete a rotation from:

| | Specially Titlernal Medicine. A student must co | inpicte a rotation norm. |
|----|---|---|
| 1 | Core - Subspecialty Int Med | BAYLOR COLLEGE OF MEDICINE, Houston, TX |
| 2 | Core - Subspecialty Int Med | BAYLOR UNIVERSITY MEDICAL CTR, Dallas, TX |
| 3 | Core - Subspecialty Int Med | BAYSTATE MEDICAL CENTER, Springfield, MA |
| 4 | Core - Subspecialty Int Med | COOK CHILDREN'S MEDICAL CENTER, Fort Worth, TX |
| 5 | Core - Subspecialty Int Med | CORPUS CHRISTI MED CTR BAY AREA, Corpus Christi, TX |
| 6 | Core - Subspecialty Int Med | DRISCOLL CHILDREN'S HOSPITAL, Corpus Christi, TX |
| 7 | Core - Subspecialty Int Med | GILL, SHAZIA M.D., Conroe, TX |
| 8 | Core - Subspecialty Int Med | JOHN PETER SMITH HOSPITAL, Fort Worth, TX |
| 9 | Core - Subspecialty Int Med | MAYO CLINIC/PHOENIX/SCOTTSDALE, Scottsdale, AZ |
| 10 | Core - Subspecialty Int Med | MAYO CLINIC/ROCHESTER, Rochester, MN |
| 11 | Core - Subspecialty Int Med | MEDICAL CENTER OF PLANO, Plano, TX |
| 12 | Core - Subspecialty Int Med | METHODIST DALLAS MEDICAL CENTER, Dallas, TX |
| 13 | Core - Subspecialty Int Med | MICHIGAN STATE UNIV CHM |
| 14 | Core - Subspecialty Int Med | PLAZA MEDICAL CENTER, Fort Worth, TX |
| 15 | Core - Subspecialty Int Med | PRESBYTERIAN HOSPITAL/DALLAS, Dallas, TX |
| 16 | Core - Subspecialty Int Med | SAN JACINTO METHODIST HOSPITAL, Baytown, TX |
| 17 | Core - Subspecialty Int Med | TEXAS A&M COLLEGE OF MEDICINE, Temple, TX |
| 18 | Core - Subspecialty Int Med | THE CENTER FOR CANCER & BLOOD DISORDERS, Fort Worth, TX |
| 19 | Core - Subspecialty Int Med | THE METHODIST HOSPITAL, Houston, TX |
| 20 | Core - Subspecialty Int Med | UNTHSC/TCOM, Fort Worth, TX |
| 21 | Core - Subspecialty Int Med | UT HOUSTON MEDICAL SCHOOL, Houston, TX |
| 22 | Core - Subspecialty Int Med | UT HSC AT SAN ANTONIO, San Antonio, TX |
| 23 | Core - Subspecialty Int Med | UTMB AT GALVESTON, Galveston, TX |
| 24 | Core - Subspecialty Int Med | VIRGINIA COMMONWEALTH UNIV, Richmond, VA |
| 25 | Core - Subspecialty Int Med | WELLINGTON REG MED CTR, Wellington, FL |
| 26 | Core - Subspecialty IM RS | COOK CHILDREN'S MEDICAL CENTER, Fort Worth, TX |
| 27 | Core - Subspecialty IM RS | GODELL, CHRISTOPHER M.D., Austin, TX |
| 28 | Core - Subspecialty IM RS | ROME BARKOCY, GARY DO, Nacogdoches, TX |
| 29 | Core - Subspecialty IM RS | UNTHSC/TCOM, Fort Worth, TX |
| 30 | Core - Subspecialty Pediatrics | COOK CHILDREN'S MEDICAL CENTER, Fort Worth, TX |
| 31 | Core - Subspecialty Pediatrics | STANFORD UNIV SCHOOL OF MED, Stanford, CA |
| 32 | Core - Subspecialty Pediatrics | SUNY DOWNSTATE MEDICAL CTR, Brooklyn, NY |
| | | |

Selective/Elective Rotation Selective/Elective Rotation Location

| 33 | Core - Subspecialty Pediatrics | UNIV OF ARKANSAS COLLEGE OF MED, Little Rock, AR |
|----|--------------------------------|--|
| 34 | Core - Subspecialty Pediatrics | UNIV OF OKLAHOMA COM/TULSA, Tulsa, OK |
| 35 | Core - Subspecialty Pediatrics | UNIV OF SOUTH CAROLINA SOM, Columbia, SC |
| 36 | Core - Subspecialty Pediatrics | UT HSC AT SAN ANTONIO, San Antonio, TX |
| 37 | Core - Subspecialty Pediatrics | UT SOUTHWESTERN MED SCH, Dallas, TX |
| 38 | Core - Subspecialty Pediatrics | UTMB AT AUSTIN, Austin, TX |

Selective/Elective Rotation

Selective/Elective Rotation Location

Selectives

Advanced Patient Care: A student must complete a rotation from:

| 1 | Advanced Patient Care | Lyndon B. Johnson General Hospital, Houston |
|---|-----------------------|--|
| 2 | Advanced Patient Care | Children's Memorial Hermann Hospital, Houston |
| 3 | Advanced Patient Care | Memorial Hermann - Texas Medical Center, Houston |
| 4 | Advanced Patient Care | St. Joseph Medical Center, Houston |
| 5 | Advanced Patient Care | University of Texas Harris County Psychiatric Center |
| 6 | Advanced Patient Care | The Methodist Hospital (APC closed May 2011) |

Required Critical Care: A student must complete a rotation from:

| 1 | Required Critical Care | Children's Memorial Hermann Hospital, Houston (site added 2010-2011) |
|---|------------------------|--|
| 2 | Required Critical Care | University of Texas MD Anderson Cancer Center, Houston |
| 3 | Required Critical Care | Memorial Hermann - Texas Medical Center, Houston |
| 4 | Required Critical Care | Lyndon B. Johnson General Hospital, Houston |

Ambulatory Medicine: A student must complete a rotation from:

| 1 | Ambulatory Medicine | Family Medicine/Internal Medicine Community Preceptors |
|---|---------------------|--|
| 2 | Ambulatory Medicine | Community Preceptors (Fam Med)* |
| 3 | Ambulatory Medicine | Community Preceptors (Int Med)* |
| 4 | Ambulatory Medicine | Medical Clinic of Houston (Int Med) |
| 5 | Ambulatory Medicine | Thomas Street Health Clinic (Int Med) |
| 6 | Ambulatory Medicine | UT Physicians- UTPB Clinic (Int Med) |

^{*}Not all FAMD/INTM community preceptors are available each month.
