---

<sup>1</sup>In calculating the margin of error (MOE) for the survey, we provide two calculations, one that compensates for the relative standard deviation of the weights and one that does not. Without taking the variance of the weights into account, the margin of error for the full sample is 2.83%. To compensate for the additional uncertainty from weighting, we apply a multiplier derived from the coefficient of variation of the weights:  $\sqrt{1+CV^2}$ , where  $CV=sd(weights)/mean(weights)$ . For this weight sensitive calculation, the MOE for the full sample is 3.28%.

- |                       |     |
|-----------------------|-----|
| 1. Republican Primary | 43% |
| 2. Democratic Primary | 48  |
| 3. Neither Primary    | 9   |

Q3C. **[ASK IF Q3B == 1|2]** On a 0-10 scale, please rate how likely you are to vote in the upcoming March primary elections: 10 means you are absolutely certain to vote, 0 means you will definitely NOT vote, and 5 means you may or may not vote.
