Sources: Texas Legislative Council, Texas Weekly

The TWI is the difference between the results for the average statewide Republican and the average statewide Democrat in the last two election cycles. If it's red, the average margin was in favor of the Republicans; if it's blue, the Democrats. ORVS was cooked up by Texas Republicans to target races. It is two-thirds of the difference between the weakest and strongest Republicans in the last two elections, computed for each political district. ODVS is the same formula applied to Democratic candidates. Names of Democrats are in blue, and Republicans are in red.
